

Transition arrangements for PSA 74:2019

NF22

PSA 74:2019, PSA Licensing Requirements for Security Service Providers has been issued. This PSA standard replaces S.R. 40:2005 for the intruder alarm scheme.

PSA 74:2019 follows the format of S.R. 40:2005 but some requirements have been amended and some new requirements have been added.

Certification bodies that are active in this scheme should put in place a plan for transition from S.R. 40:2005 to PSA 74:2019 that should include:

- Changes identified, with all specific actions to be taken to implement the changes;
- Revised checklists;
- Details of training and assessment of competence of certification body personnel;
- Details of communication with clients and impact on audit time;
- The timeframe and persons responsible for completion of such actions.

Certification bodies operating this scheme shall apply for an extension to scope via the CRM and submit the transition plan and documentary evidence with the application. INAB will amend scopes following successful review of the application.

Witnessing during 2020 will confirm effective implementation.
